

ABSTRACT OF THE DISCLOSURE

000290" 526265d  
A method and a wireless communication control  
apparatus for handing off a mobile station in a mobile  
5 communication system including at least two wireless base  
stations. A handoff threshold which is set in the mobile  
station is varied according to quality of a wireless link  
between the mobile station and a first wireless base  
station which currently controls the mobile station. Then,  
10 the processing for handing off the mobile station from the  
first wireless base station to a second wireless base  
station is performed based on the handoff threshold.
